Making a Garden in New England

IT HAS often been said that a house is not a home until the grounds have been planted. Having devoted more than 20 years to the growing of trees, shrubs, and perennials, we have, by experience, learned to know those plants which succeed best in this picturesque section of New England. Since we are eager to help our clients to use their plants to best advantage, we have employed competent landscape architects to provide them with workable plans for their gardens.

We are equally interested in the small home-garden and in the large estate because the owner in each case is eager to have attractive home-grounds.

The building and maintaining of lawns is one of our specialties. We can help you to improve your lawn or make a new one.

Our Landscape Contracting Department is widely recognized for its expert work in the building of roads, walks, garden walls, tennis courts, and other forms of landscape work.

We can furnish the following landscape materials:

Drain Stone, Blue Stone, Blue Stone Dust, Filling, Road Gravel, Cinders, Field and Screened Loam, Compost, Leaf-Mold, all sizes of Pasture Stone, all kinds of Flagging, Sub-soil, Calcium Chloride, and Salt Marsh Hay.

Tree surgery has helped greatly in preserving some of the finest old trees in New England. If you are fortunate enough to possess great specimen trees, you are, no doubt, anxious to keep them in vigorous growth. You can feel free to consult us about your problems. Our men are qualified in the moving, pruning, and spraying of all kinds of trees. Since the recent hurricane, we have helped many clients to solve difficult problems. We are eager to help you.

Our Ipswich Nurseries are located on Route 121; the Gloucester Nurseries are on Route 127

IMPORTANT NOTICE

Hardy Perennials

Perennials are plants that grow and flourish year after year. To be sure they need to be divided and replanted every few years, but this is a part of the fun of gardening. Each time the perennial border is replanted, you can make a new garden picture.

HARDY PERENNIALS AND ROCK-PLANTS

Perennials include most of the finest flowering plants as well as the foundation material for practically every well-planned garden. They exist in infinite variety, size, and color, and their period of bloom covers the entire season. A well-chosen collection of perennials provides a great source of garden interest.

The material we offer is strong, field-grown stock with the exception of some varieties which transplant better from pots.

We strongly advise the purchase of perennials in quantities of 3 or more, since a group of 3 or more plants makes a much more striking and effective color mass in the garden. Please remember that 5 or more plants of one variety may be purchased at the cost per 10 and that 25 or more of one kind may be purchased at the price per 100 when such price is quoted.

★ADAPTABLE TO ROCK-GARDENS

If you are not ready to plant them in permanent places, they should be heeled in, in an upright position, and the roots kept moist until they are planted. This method will keep your plants in prime condition.

HARDY PHLOX

The hardy perennial Phlox deserves a prominent place in all hardy flower borders, or where breaks of brilliant colors are required during July, August, and September. For general border decoration, no other family is capable of producing such fine displays of dazzling color at a time when there is little else to depend on. Their large heads of bloom are excellent for cutting, as well.

The immense size and perfect form of the new varieties will be a revelation to those who know only the old-fashioned kinds. We offer the good old and outstanding new varieties, all of which have been tried and tested for desirability and trueness to name. Our collection is the result of careful selection over a period of many years and we confidently recommend it as consisting of the best available varieties.

CULTURE. Phlox will grow and bloom almost anywhere; however, they are gross feeders and if given rich soil and plenty of moisture, best results can be obtained. To grow Phlox really well, the soil

should be well drained, deeply spaded, enriched with rotted manure or bonemeal, and well cultivated. Planting may be done in fall or spring in a sunny border. Set the plants 12 to 15 inches apart. Lift and divide every three or four years or they will become crowded, which results in poor, small flowers. Be sure to **REMOVE** all flower-heads before they go to seed. Phlox require considerable **WATER** during the blooming period. **NEVER WATER OVERHEAD**; always keep blooms and foliage dry, letting hose run slowly on the ground. This method of watering prevents mildew.

If mildew appears, indicated by a white powdery substance on the leaves during changeable weather, spray with sulphide of potassium, 1 ounce to 3 gallons of water, to which a little soap should be added, or apply a good brand of fine dusting sulphur in early June, using a duster to insure a coating **BENEATH** as well as above the foliage. Repeat every two weeks if needed.
